Application No.: 10/644,221

Response to Office Action dated August 29, 2006

Paper dated November 27, 2006 Attorney Docket No.: 1217-031377

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims

- Claim 1. (Currently Amended) A method for treating viral diseases a human infected with human immunodeficiency virus (HIV), comprising:
- (a) inoculating *Lentinus edodes* fungus in a solid culture medium comprising 90 parts by weight of bagasse and 10 parts by weight of rice bran to yield proliferated mycelium;
- (b) disentangling the solid culture medium containing the proliferated mycelium so that the amount of the bagasse of 12-in mesh is not more than 30% by weight and adding thereto 1 to 10 kg of water and 0.5 to 5 g of at least one enzyme selected from the group consisting of cellulase, protease and glucosidase based on 1 kg of the disentangled solid culture medium, while keeping the solid culture medium at 30 to 50°C, to give a bagasse-containing mixture;
- (c) grinding and milling the bagasse-containing mixture so that the amount of the bagasse of 12-in mesh is not less than 70% by weight;
- (d) heating the ground and milled bagasse-containing mixture to a temperature of 75 to 95°C to inactivate the enzyme;
- (e) filtering the resultant mixture through a filter cloth of 50 to 120-in mesh to thereby obtain a <u>purified</u>, <u>concentrated</u> pharmaceutical *Lentinus edodes* mycelium extract; and
- (f) administering <u>orally</u> at least one effective dose of said <u>purified</u>, <u>concentrated</u> extract to a <u>said</u> human <u>afflicted with a viral disease</u>, <u>wherein said viral disease is human immunodeficiency virus</u>, <u>wherein said extract weakens HIV activity and inhibits HIV proliferation in said human</u>.
- Claim 2. (Original) The method according to claim 1 wherein the enzyme is cellulase.

Claims 3-5. (Canceled)
